Business Problem

- How can we optimize product development, marketing strategy, and customer engagement to increase market share and profitability on the Steam platform?

Objective

- Evaluate game performance across product, pricing, and engagement
- Identify opportunities to improve market reach and profitability
- Support strategic decision-making with data-driven insights

Dashboard

Steam Deck Portability Strategy

- Current Inventory: 4,71K games compatible with Steam Deck.
- Recommendation Gap: Only 2,84K titles (60%) currently hold "Recommended" status.
- The Development Goal: Optimize the remaining 1,870 titles to secure "Recommended" badges.
- Impact: Enhanced discoverability in the handheld store and improved hardware-software synergy.

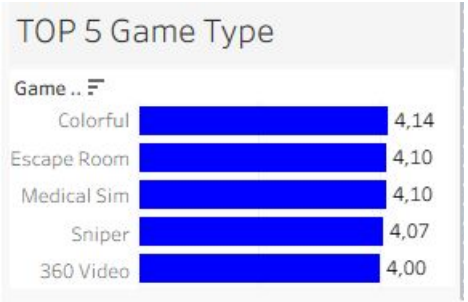
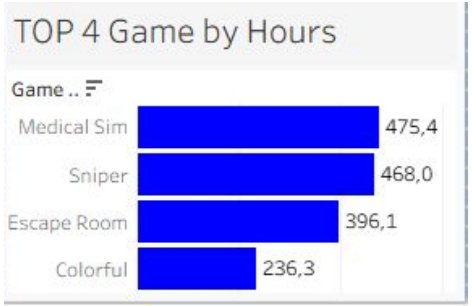
Leveraging "High-Stickiness" Genres for Premium Pricing

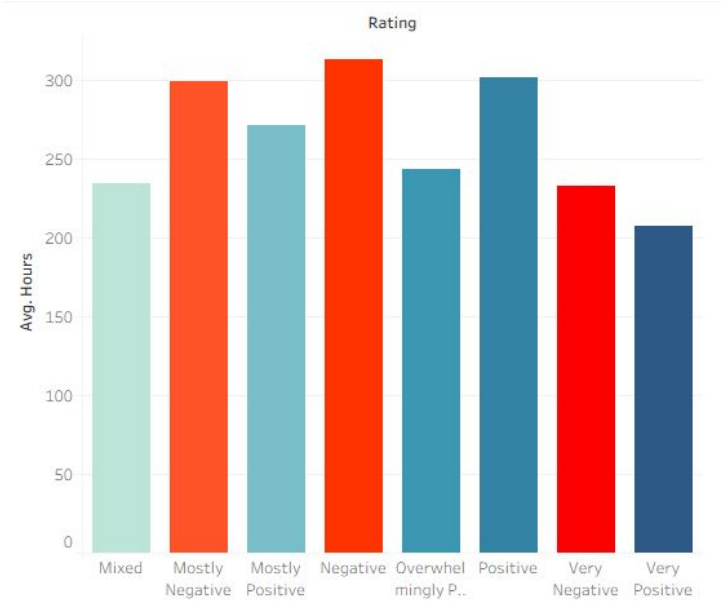
- **Genre Powerhouses**: Medical Sim and Sniper genres align perfectly with Top Playtime metrics.
- **Market Leader**: Apex Legends (Trading Card Game) drive our highest review volume and playtime.
- **Pricing Ceiling**: While average price is $8.35, successful outliers (Vegas PRO at $149) indicate a market for high-ticket, utility-driven software.
- **Strategy**: Implement the price strategy from "Flat Pricing" to "Tiered Value Pricing" ($14.99–$29.99) for games within our most engaged genres..





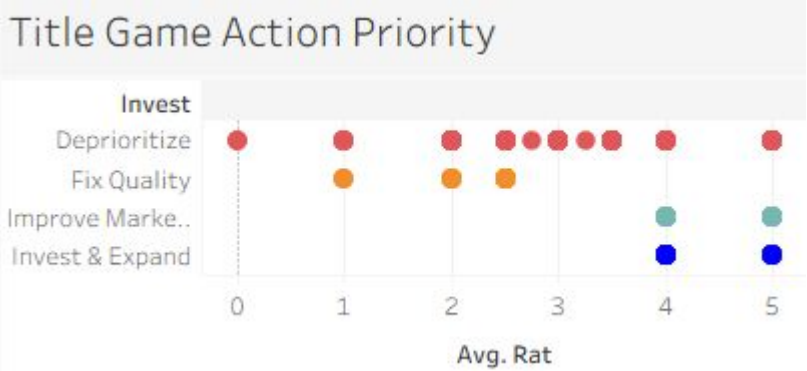
Players invest significant time across the playtime

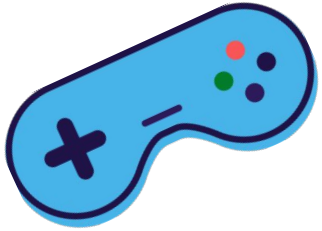
- Engagement strength is a core competitive advantage.
- Average playtime reaches 392 hours per game
- Engagement remains high across rating categories, indicates strong retention and repeat usage behavior.
- *Mostly Negative* games have higher average playtime (298.8 hrs) than *Overwhelmingly Positive* games (243.2 hrs). This suggests that "Hate-playing" or high-difficulty games exist. People are playing them a long time but aren't happy. This is a retention risk.



Action Priority Mapping

Even though by Game Type Dungeon Crawler and Casual isn't on TOP 5, but based on Title by rating, Creeper World 4 and 2D Dwag 2 should be our focus for Invest and Expand.





OBIPR

Objective	Business Impact	Isolation	Priority	Recommendation
To increase company market share and profitability by optimizing Steam Deck compatibility and reducing "Churn Risk" indicated by negative review spikes.	Projected 15–20% increase in revenue by converting "On-Deck" titles to "Recommended" and raising prices in high-loyalty genres.	Focus on Game Type and Title, not by Date Release	• High - Optimize the 1,870-title Steam Deck gap • High - Invest on Game Title Priority Action	• Focus on Genre Medical Sim and Sniper, as they are currently leading in playtime. • Test a $19.99 price point for titles in the "Invest & Expand" quadrant to break away from the $8.35 average • Expand visibility for high-quality but underplayed titles.
